

Assignment 3

Assignment 3 should be handed in before the **9th** of June. It consists of one component. The **code should be handed in** as well as a small text with a **minimum of 200 words** explaining the approaches and the value these could have in a musical setting. The value of the assignment is 30% of the final grade.

1. Implement a process in SuperCollider that will listen, evolve, adapt or learn once executed. The model and algorithm could use one of the following approaches:

- Sound analysis / Machine Listening
- Machine learning with regression
- Machine learning with classification
- A Genetic algorithm
- Cellular Automata

The goal of the project is to focus on something that will listen, evolve, adapt or learn, but otherwise you are free to choose the direction.

The written text here should reflect on the approach chosen, what it involves and what novel ways it opens for working with sound.
